Blue

While blue is one of the most popular colors, it is one of the least appetizing. Food researchers say that when humans searched for food, they learned to avoid toxic or spoiled objects, which were often blue, black or purple. When food dyed blue is served to study subjects, they lose appetite.

Carbon Emission

When countries assess their annual carbon emissions, they count up their cars and power stations, but bush fires are not included – presumably because they are deemed to be events beyond human control. In Australia, Victoria alone sees several hundred thousand hectares burn each year; in both 2004 and more recently, the figure has been over one million hectares.

Tesla and Edison

Tesla's theoretical work formed the basis of modern alternating current electric power systems. Thomas Edison promised him almost one million dollars in today's money to undertake motor and generator improvement. However, when Tesla, the ethical Serb, asked about the money, Edison's reportedly reply was "Tesla, you don't understand our American humor." The pair became arch-rivals.

Productive Capacity

The core of the problem was the immense disparity between the country's productive capacity and the ability of people to consume. Great innovations in productive techniques during and after the war raised the output of industry beyond the purchasing capacity of U.S. farmers and wage earners.

Father

Every morning, no matter how late he had been up, my father rose at five-thirty, went to his study, wrote for a couple of hours, made us all breakfast, read the paper with my mother, and then went back to work for the rest of the morning. Many years passed before I realized that he did this for a living.

Himalayas

Although it hails from a remote region of the western Himalayas, this plant now looks entirely at home on the banks of English rivers, and colonized river banks and damp woodlands. In the Himalayas the plant is held in check by various pests, but take these away and it grows and reproduces unhindered. Now it is spreading across Europe, New Zealand, Canada and the US.

Pluto

Pluto lost its official status when the International Astronomical Union downsized the solar system from nine to eight planets. Although there had been passionate debate at the General Assembly Meeting in Prague about the definition of a planet, and whether Pluto met the specifications, the audience greeted the decision to exclude it with applause.

Fiscal Year

At the beginning of each fiscal year funds are allocated to each State account in accordance with the University's financial plan. Funds are allocated to each account by object of expenditure. Account managers are responsible for ensuring that adequate funds are available in the appropriate object before initiating transactions to use the funds.

Shakespeare

A young man from a small provincial town, a man without independent wealth, without powerful family connections and without a university education, moves to London in the fifteen eighties, and becomes a remarkable playwright of all time. How is an achievement of magnitude made? How does Shakespeare become Shakespeare?

Akimbo

Akimbo, this must be one of the odder-looking words in the language and puzzles us in part because it doesn't seem to have any relatives. What's more, it is now virtually a fossil word, until recently almost invariably found in arms akimbo, a posture in which a person stands with hands on hips and elbows sharply bent outward, one signalling impatience or hostility.

Yellow

Yellow is considered as the most optimistic color, yet surprisingly, people lose their tempers most often in yellow rooms and babies will cry more. The reason may be that yellow is the hardest color for eyes to take in, so it can be overpowering if overused.

Elephant

The elephant is the largest living land mammal. During evolution, its skeleton has greatly altered from the usual mammal, designed for two main reasons. One is to cope with the great weight of huge grinding cheek teeth and elongated tusk, making the skull particularly massive. The other is to support the enormous bulk of such a huge body.

Grand Canyon

Few things in the world produce such amazement as one's first glimpse of the Grand Canyon; it took around more than 2 billion years to create this vast wonder in some places. 17 miles wide, largely through the relentless force of the Colorado River, which runs 277 miles along its length and a mile beneath its towering rims.

Global Warming

Global warming is defined as an increase in the average temperature of the earth's atmosphere. This trend began in the middle of the 20th century and is one of the major environmental concerns of scientists and governmental officials worldwide. The changes in temperature result mostly from the effect of increased concentrations of greenhouse gasses in the atmosphere.

Lincoln

Lincoln's apparently radical change of mind about his war powers to emancipate slaves was caused by the escalating scope of the war, which convinced him that any measure to weaken the Confederacy and strengthen the Union war effort was justifiable as a military necessity.

Furniture

There are perhaps three ways of looking at furniture: some people see it as purely functional and useful, and don't bother themselves with aesthetics; others see it as essential to civilized living and concern themselves with design and how the furniture will look in a room. In other words, function combined with aesthetics; and yet others see furniture as a form of art.

Modern buildings

Modern buildings have to achieve certain performance requirements, at least to satisfy those of building codes, to provide a safe, healthy, and comfortable environment. However, these conditioned environments demand resources in energy and materials, which are both limited in supply, to build and operate.

Historian

As a historian, if you really want to understand the sensibilities of those who lived in the past, you must be like a novelist and get into the skins of your characters and think and feel as they do. You are asked to imagine what it's like to be a peasant in medieval times, asking the sort of questions a peasant might ask. What the writer is saying is that a historian needs imaginative sympathy with ordinary people in the past.

Energy and Pollution

Humans need to use energy in order to exist. So it is unsurprising that the way people have been producing energy is largely responsible for current environmental problems. Pollution comes in many forms, but those that are most concerning, because of their impact on health, result from the combustion of fuels in power stations and cars.

Rehabilitation

The primary application we're targeting at first is to give people a decision aid during rehabilitation, following an acute knee injury, to help them understand when they can perform particular activities, and when they can move to different intensities of particular activities. A useful thing to take a crack at.

The Border

The border itself between Mexico and United States is fraught with a mix of urban and desert terrain and spans over one thousand nine hundred miles. Both the uninhabited areas of the border and urban areas are where the most drug trafficking and illegal crossings take place. Crime is prevalent in urban cities like El Paso, Texas and San Diego, California.

Networking

Networking is easy and fun because it taps into this human predilection to talk about ourselves when asked. Consider successful networking as little more than the process of guiding a person to tell you about his life, what he's doing, the company that employs him, and his current industry.

Hubble Space Telescope

The successor to the Hubble Space Telescope has been delayed yet again and will not now launch until "approximately May 2020". The James Webb Space Telescope is also in danger of busting the cost cap put on the project by the US Congress. Back in 2011, politicians on Capitol Hill said the observatory should not take more than \$8 billion dollars to build and \$800 million dollars to operate over five years in orbit.

Microbes

Such cross-protection is usually seen between two animals. But Gore studies the same sort of mutualism in microbes. He and his team demonstrated the first experimental example of that cross-protective relationship in drug-resistant microbes, using two strains of antibiotic-resistant E. coli bacteria: one resistant to ampicillin, the other to chloramphenicol.

Botanic Garden

Botanic gardens are scientific and cultural institutions established to collect, study, exchange, and display plants for research and for the education and enjoyment of the public. There are major botanic gardens in each capital city. Zoological parks and aquariums are primarily engaged in the breeding, preservation, and display of native and exotic fauna in captivity.

Agricultural problems

Agricultural problems due to climate change of normal weather, water depletion and the collapse of soil have become big problems in all parts of the world. Many are now focusing on ethics and family farming as a way to combat these issues.

Augustus

Augustus was given the powers of an absolute monarch, but he presented himself as the preserver of republican traditions. He treated the Senate, or state council, with great respect, and was made Consul year after year. He successfully reduced the political power of the army by retiring many soldiers, but giving them land or money to keep their loyalty.

Industrial Revolution

As to the Industrial Revolution, one cannot dispute today the fact that it has succeeded in inaugurating in a number of countries a level of mass prosperity which was undreamt of in the days preceding the Industrial Revolution. But, on the immediate impact of Industrial Revolution, there were substantial divergences among writers.

Vanilla

The uniquely scented flavor of vanilla is second only to chocolate in popularity on the world's palate. It's also the second most expensive spice after saffron. But highly labor-intensive cultivation methods and the plant's temperamental life cycle and propagation mean production on a global scale is struggling to keep up with the increasing demand for the product.

Teacher's instruction

In classes, your teachers will talk about topics that you are studying. The information that they provide will be important to know when you take tests. You must be able to take good written notes from what your teacher says.

An innovative new product

An innovative new product or service can give a firm a head start over its rivals, which can be difficult for a new entrant to overcome. If the new technology is also patented, then other firms cannot simply copy its design. It is legally protected.

Statistics

Statistics are indicators of change and allow meaningful comparisons to be made. While it may be the issues rather than the statistics as such that grab people's attention, it should be recognized that it is the statistics that informed the issues. Statistical literacy, then, is the ability to accurately understand, interpret and evaluate the data that inform these issues.

Political problems

The course considers the ways in which thinkers have responded to the particular political problems of their day and the ways in which they contribute to a broader conversation about human goods and needs, justice, democracy, and the proper relationship of the individual to the state.

Child psychology

Within this free course, you will be introduced briefly to the discipline of child psychology and to theories and approaches that have been developed to help us understand and support children's lives by focusing on the individual children. Psychologists can assess changes in their child's abilities over time, including their physical, cognitive, social, and emotional development.

Scottish literature

Despite many similarities with literary political debate and other nations, there are also ways in which the cultural and political situation in Scotland has left a study of Scottish literature in a significantly different condition from that of a literary studies in many other parts of the world.

Two Sisters

Two sisters were at a dinner party when the conversation turned to upbringing. The elder sister started to say that her parents had been very strict and that she had been rather frightened of them. Her sister, younger by two years, interrupted in amazement. "What are you talking about?" she said, "Our parents were very lenient."

Urban forests

Urban forests can show pride and community spirit. Trees enhance community economic stability by attracting businesses and tourism. People linger and shop longer along tree-lined streets, apartments and offices in wooded areas, rent more quickly and have higher occupancy rates. Businesses leasing office space and developed developments with trees find their workers are more productive and absenteeism is reduced.

A single research study

Rarely, however, does a single research study produce the certainty needed to assume that the same results will apply in all or most settings. Rather, research is usually an ongoing process, based on many accumulated understandings and explanations that, when taken together, lead to a generalization of educational issues and ultimately, to the development of theories.

Russia

Long isolated from Western Europe, Russia grew up without participating in the development like the Reformation that many Europeans taking pride in their unique culture, find dubious value. Russia is, as a result, the most unusual member of European family, if indeed it is European at all. The question is still open to debate, particularly among Russians themselves.

Marketing Management

For any marketing course that requires the development of a marketing plan, such as Marketing Management, Marketing Strategy and Principles of Marketing. This is the only planning handbook that guides students through step by step creations of a customized marketing plan while offering commercial software to aid in the process.

Get enough fluid

Your body is nearly two-thirds water. And so it is really important that you consume enough fluid to stay hydrated and healthy. If you don't get enough fluid you may feel tired, get headaches, and not perform at your best.

Attendance at Cultural Events

To some extent, attendance at cultural venues and events is influenced by a person's age and the composition of the household in which they live. For example, those people in households with dependent children were more likely to visit zoological parks and aquariums than people living in single person households.

Your tutor

Your tutor helps you make the most of your time at university by giving you guidance and support along the way. All new students are allocated a personal tutor who will encourage you to get the most out of your course, direct you to other sources of support and help you achieve your goals.

Statistical Information

The provision of accurate and authoritative statistical information strengthens our society. It provides a basis for decisions to be made on public policy, such as determining electoral boundaries and where to locate schools and hospitals. It allows businesses to know their market, grow their business, and improve their marketing strategies by targeting their activities appropriately.

Giving helps with depression

At a time when stress levels are soaring, rates of depression are increasing and the gap between rich and poor is ever widening. We believe that giving can play a positive role in helping people to feel connected to those around them and generate a sense of purpose and hope. When we give, we feel valued, useful and happy.

William Shakespeare

Three hundred and eighty years after his death, William Shakespeare remains the central author of the English-speaking world; he is the most quoted poet and the most regularly produced playwright — and now among the most popular screenwriters as well. Why is that, and who "is" he? Why do so many people think his writing is so great? What meanings did his plays have in his own time, and how do we read, speak, or listen to his words now?

Antarctica

The world's fifth-largest continent Antarctica is almost entirely covered by ice over 2000 (two thousand) meters thick. The area sustains a varied wildlife, including seals, whales, and penguins. The Antarctic Treaty, signed in 1959 (nineteen fifty-nine) and in force since 1961 (nineteen sixty-one), provides for international governance of Antarctica. To gain Consultative Status, countries have to set up a program of scientific research into the continent. Following a 1994 (nineteen ninety-four) international agreement, a whale sanctuary was established around Antarctica.

Environmental Policy Course

Along with customary classes on subjects such as finance, accounting, and marketing, today's MBA students are enrolling on courses for environmental policy and stewardship. Indeed, more than half of business schools require a course in environmental sustainability or corporate social responsibility, according to a survey of 91 US business schools, published in October 2005.

Art as expression

Expression became important during the Romantic movement with artwork expressing a definite feeling, as in the sublime or dramatic. Audience response was important, for the artwork was intended to evoke an emotional response. This definition holds true today, as artists look to connect with and evoke responses from their viewers.

Business School Admissions

Business school admissions officers said the new drive to attract younger students was in part the result of a realization that they had inadvertently limited their applicant pool by requiring several year's work experience. Talented students who might otherwise have gone to business school instead opted for a law or policy degree because they were intimidated by the expectation of work experience.

Online Shopping Environments

A unique characteristic of online shopping environments is that they allow vendors to create retail interfaces with highly interactive features. One desirable form of interactivity from a consumer perspective is the implementation of sophisticated tools to assist shoppers in their purchase decisions by customizing the electronic shopping environment to their individual preferences.

Bookkeepers

A national study into fraud by bookkeepers employed at small and medium-sized businesses has uncovered sixty-five instances of theft in more than five years, with more than thirty-one million dollars stolen. Of the cases identified by the research, 56 involved women and nine instances involved men. However, male bookkeepers who defrauded their employers stole three times, on average, the amount that women stole.

Domestic Work

Traditional divisions of domestic work are understood to persist because of the strong association of the home with femininity and paid work with masculinity, to challenge who does what in the home is arguably equivalent to challenging what it is to be a woman or a man.

The Only Family

Imagine living all your life as the only family on your street. Then, one morning, you open the front door and discover houses all around you. You see neighbors tending their gardens and children walking to school. Where did all the people come from? What if the answer turned out to be that they had always been there, you just hadn't seen them?

The Most Measurable Benefit

Perhaps the most measurable benefit of the program has been the opportunity to meet in small groups, something that is difficult to arrange in such a desperate organization. Many officers would have to work together for thirty years but would not know each other's strengths and weaknesses.

Teenage Girls

Teenage girls are continuing to outperform boys in English while the gender gap in achievements in math and science has almost disappeared. The figures show that last year eighty percent of fourteen-year-old girls reached at least the expected Level Five in English, compared with sixty-five percent of boys. But in math, the girls are just one percent ahead of boys, while in science the difference is two percent.

Black Swan

Before the discovery of Australia, people in the old world were convinced that all swans were white, an unassailable belief as it seemed completely confirmed by empirical evidence. The sighting of the first black swan might have been an interesting surprise for a few ornithologists, but that is not where the significance of the story lies.

Important Values of Literature

Certainly, one of the important values of literature is that it nourishes our emotional lives. An effective literary work may seem to speak directly to us especially if we are ripe for it. The inner life that good writers reveal in their characters often gives us glimpses of some portion of ourselves. We can be moved to laugh, cry, tremble, dream, ponder, shriek, or rage with a character by simply turning the page instead of turning our lives upside down.

Norms and values

Members of a culture must conform to its norms for the culture to exist and function. Hence, members must want to conform and obey rules. They first must internalize the social norms and values that dictate what is normal for the culture. Then they must socialize or teach norms and values to their children.

Attending the theatre

Experts discuss the significance of attending the theater as a civic occasion, associated with the political and cultural achievements of Athens. Through archeology and analyses of contemporary art forms such as decoration on pottery, a picture is built up of ancient Greek theater.

Recycle

When we recycle, used materials are converted into new products, reducing the need to consume natural resources. If used materials are not recycled, new products are made by extracting fresh, raw material from the Earth, through mining and forestry. Recycling helps conserve important raw materials and protects natural habitats for the future.

Consumer culture

In this course, we will explore how such things as department stores, nationally advertised brand-name goods, mass produced cars and suburbs transformed the American economy, society and politics. The course is organized both thematically and chronologically. Each period deals with a new development in the history of consumer culture.

Tortoise

The tortoise size and shell shape varies depending on where they live. The shell is made of bone and is a dull brown color. Their ribs, backbone and breastbone have become part of the shell, which is why you can never separate the tortoise from its shell.

Terms for certain items

An industry or work place often has its own terms for certain items, places, or groups of people, and a university is no different. Here we have attempted to explain some of the terms you may come across on our website that are specific to higher education.

Learner's experience

We seek to improve learner's experience of education at college and help them to aspire, achieve and progress. We must embed equality and diversity in everything we do, both as a provider and an employer. We hope to prepare our students for work, higher education and citizenship by equipping our staff with the skills to meet this agenda.

The natural environment

The natural environment can be hazardous, and, with increased travel and leisure, people today are more likely than ever to be exposed to potentially life-threatening conditions. Although the human body can adjust to some extent, it cannot cope with poisons or prolonged exposure to extremes of environment.

Emigrants to North America

In the late 16th and 17th centuries, many English, French and Dutch emigrants went to North America in search of gold and silver. But they did not find it. Instead, settlers were forced to support themselves by cultivating crops that they could sell in Europe, like tobacco, indigo and rice.

Volcano behaviors

There were various explanations for volcano behavior before the structure of the earth's mantle as a semisolid material was developed. For decades, awareness that compression and radioactive materials may be heat sources was discounted and volcanic action was often attributed to chemical reactions and a thin layer of molten rock near the surface.

Brain hemispheres

The brain is divided into its hemispheres by a prominent groove. At the base of this lies nerve fibers which enable these two halves of the brain to communicate with each other. But the left hemisphere usually controls movement and sensation in the right side of the body, while the right hemisphere similarly controls the left side of the body.

New textbook

This is a new, accessible and engaging textbook written by academics who also work as consultants with organizations undergoing change. It offers a unique combination of rigorous theoretical exploration together with practical insights from working with those who are actually responsible for managing change.

Scientific evidence

The latest scientific evidence on the nature and strength of the links between diet and chronic diseases is examined and discussed in detail in the following sections of this report. This section gives an overall view of the current situation and trends in chronic diseases at the global level.

The word radical

The word radical from the Latin word for roots means anyone who advocates fundamental change in the political system. Literally, a radical is one who proposes to attack some political or social problem by going deep into the social or economic fabric to get at the root cause and alter this basic weakness.

Humanities and social sciences

We believe in the inherent value of research in the humanities and social sciences. And our research data agenda is given by the pursuit of new knowledge that will be of benefit of Australia and the world. We offer one of the most comprehensive programs in the humanities and social sciences in Australia and the Asian Pacific region.

Chasing the Flame

Yet it is precisely in observing the intertwinings of success and failure that Chasing the Flame makes its greatest mark. With piercing insight and relentless logic, it reveals the pitfalls of international politics and details an intricate struggle between individual and institution. It haunts us with the poignant truth that even a great man can do only so much to reinvent the world.

A thesis

A thesis is a claim that you can argue for or against. It should be something that you can present persuasively and clearly in the scope of your paper, so keep in mind the page count. If possible, your thesis should also be somewhat original.

US Automobile market

The United States is at present the world's market for motor cars and trucks. An agent for the U.S. Bureau of Foreign and Domestic Commerce reports a prosperous condition of affairs prevailing in Japan, which is buying more automobiles, especially large cars, than ever before.

Restaurant location

The physical location of a restaurant in the competitive landscape of the city has long been known as a major factor in its likely success or failure. Once restaurants are established in such environments they can do little about their location. All they can do is work to improve customer access to their premises. Restaurateurs often do this by engaging in battles with local authorities about car parking.

Babies' hearing

Most babies start developing their hearing while still in the womb, prompting some hopeful parents to play classical music to their pregnant bellies. Some research even suggests that infants are listening to adult speech as early as 10 weeks before birth, gathering the basic building blocks of their family's native tongue.

Barley grains

University of Adelaide researchers have uncovered fundamental new information about the malting characteristics of barley grains. They say their finding could pave the way to more stable brewing processes or new malts for craft brewers. Published in the Nature publication Scientific Reports, the researchers discovered a new link between one of the key enzymes involved in malt production for brewing and a specific tissue layer within the barley grain.

Eminent professors

Written by three eminent professors, it has been updated to reflect the shifts of sociological thought in the last five years, making it the most comprehensive, authoritative and up-to-date dictionary available. It is essential reading for all students and teachers of sociology and other related courses - and also the general reader.

Food is important

Food is one of the most important things you'll ever buy. And yet most people never bother to think about their food and where it comes from. People spend a lot more time worrying about what kind of blue jeans to wear, what kind of video games to play, what kind of computers to buy.

Microscopic invaders

We all know about bacteria, viruses, and microscopic protozoa. We can watch the way that these tiny agents move into our bodies and damage our organs. We have a growing understanding of how our body mounts defensive strategies that fight off these invaders, and have built some clever chemical that can help mount an assault on these bio-villains.

Windows in the painting

We can see from the X-rays that at an early stage of painting, a window was painted in at the left of the portrait. It seems that there may have been two windows in the initial design for the portrait or that the window was moved at an early stage.

Quotes

Many papers you write in college will require you to include quotes from one or more sources. Even if you don't have to do it, integrating a few quotes into your writing can add life and persuasiveness to your arguments. The key is to use quotes to support a point you're trying to make rather than just include them to fill space.

Lincoln's executive order

But on May 3rd a couple of weeks later, Lincoln issued an executive order calling for 43,000 3-year volunteers for the army and also increasing the size of the regular army and navy by 40,000 men. Both these actions were in apparent violation of the constitution.

Physical Activity

Participating regularly in physical activity has been shown to benefit an individual's health and wellbeing. Regular physical activity is important in reducing the risk of chronic diseases, such as heart disease and stroke, obesity, diabetes and some forms of cancer. The National Physical Activity Guidelines for Adults recommends at least 30 minutes of moderate-intensity physical activity, preferably every day of the week, to obtain health benefits.

Graduate admission school

Since our graduate admission school is not centralized, each of the university schools and colleges admits students to its own programs. For information about specific program degrees, graduate applications, graduate admission requirements and procedures, graduate scholarships and status of your application, visit the individual school websites.

Flood control

We've spent a lot of money over the last 70 years on flood control, and it's protected millions of people and has saved us billions of dollars. We've built dams to hold back the waters. We've built levees to keep the water off the people, and we've raised the ones that were originally started in 1718.

Personal libraries

Scholars build their own personal libraries to support not only particular projects but also general reading in their field. They buy or make photocopies of materials when possible so they can consult them frequently, mark passages, and write annotations on them. When moving into a new field, they add to their collections, usually concentrating on primary texts.

Mature trees

The wonderful framework of mature trees creates a secluded enclosed atmosphere that unites a great variety of plantings to inspire visitors in all seasons. Spring in the garden is marked by the leafing up and flowering of trees and eruption of flowers in the bulb meadows and woodland understory.

Beginning of the lecture

Don't miss the very beginning of a lecture since that is often the most valuable part. For instance, because it reviews previous lectures or outlines objectives and lecture structure. If you easily get distracted by other students, sit near the front.

Emigrants to North America

In the late 16th and 17th centuries, many English, French and Dutch emigrants went to North America in search of gold and silver. But they did not find it. Instead, settlers were forced to support themselves by cultivating crops that they could sell in Europe, like tobacco, indigo and rice.

Yellow Tulip

How do we imagine the unimaginable? If we're asked to think of an object - say, a yellow tulip - a picture immediately forms in our mind's eye. But what if we try to imagine a concept such as the square root of negative number?

The natural environment

The natural environment can be hazardous, and, with increased travel and leisure, people today are more likely than ever to be exposed to potentially life-threatening conditions. Although the human body can adjust to some extent, it cannot cope with poisons or prolonged exposure to extremes of environment.

Marijuana

Another administration option is to bake marijuana at a relatively low temperature to kill any dangerous microorganisms and then allow that patient to eat it or drink it. Both of these methods of administration make smoking the drug unnecessary. However, criticism of medical marijuana has also been raised because as a natural plant, it cannot be patented and marketed by pharmaceutical companies and is unlikely to win widespread medical acceptance.

Introvert and Extrovert

Introvert, or those of us with introverted tendencies, tends to recharge by spending time alone. They lose energy from being around people for long periods of time, particularly large crowds. Extroverts, on the other hand, gain energy from other people. Extroverts actually find their energy is sapped when they spend too much time alone. They recharge by being social.

US Automobile market

The United States is at present the world's market for motor cars and trucks. An agent for the U.S. Bureau of Foreign and Domestic Commerce reports a prosperous condition of affairs prevailing in Japan, which is buying more automobiles, especially large cars, than ever before.

Aquaculture

Aquaculture, also known as aquafarming, is the farming of aquatic organisms such as fish, crustaceans, molluscs and aquatic plants. Aquaculture involves cultivating freshwater and saltwater populations under controlled conditions.

Carbon Emission

When countries assess their annual carbon emissions, they count up their cars and power stations, but bush fires are not included – presumably because they are deemed to be events beyond human control. In Australia, Victoria alone sees several hundred thousand hectares burn each year; in both 2004 and more recently, the figure has been over one million hectares.

Trade Unions

Trade unions originated in Europe during the industrial revolution. Because of the machinery that had become commonplace, skilled labour became less in demand so employers had nearly all of the bargaining power. Employers mistreated the workers and paid them too little for the work they did. Trade unions were organised that would help in the improvement of working conditions.

History is selective

History is selective. What history books tell us about the past is not everything that happened, but what historians have selected. They cannot put in everything: choices have to be made. Choices must similarly be made about which aspects of the past should be formally taught to the next generation in the shape of school history lessons.

Tissues and organs

Tissues are grouped together in the body to form organs. These include the brain, heart, lungs, kidneys, and liver. Each body organ has a specific shape and is made up of different types of tissue that work together. For example, the heart consists mainly of a specialized type of muscle tissue, which contracts rhythmically to provide the heart's pumping action.

Hunter-gatherer

The life of a hunter-gatherer is indeed, as Thomas Hobbes said of the state of nature, 'solitary, poor, nasty, brutish, and short'. In some respects, to be sure, wandering through the jungle bagging monkeys may be preferable to the hard slog of subsistence agriculture.

Long-Distance Fliers

Researchers think that long-distance fliers such as the American golden-plover and the white-rumped sandpiper picked up the spores while lining their nests. Then when the birds arrive in new places they molt, leaving behind the feathers and their precious cargo-to start growing again at the other end of the world.

Moods

Moods may also have an effect on how information is processed, by influencing the extent to which judges rely on pre-existing, internal information, or focus on new, external information. Positive moods promote more holistic and top-down processing style, while negative moods recruit more stimulus-driven and bottom-up processing.

Blue whales

Blue whales are the largest living mammals. Though reports of maximum length and weight vary from one account to another, Antarctic blue whales are known to have reached lengths to 100 feet and weights of over 150 tons before stocks were severely depleted by whaling operations.

Soil Samples

Investigators also compared those microbes with those living in fifty-two other soil samples taken from all around the planet. The park had organisms that also exist in deserts, frozen tundra, forests, rainforests, and prairies. Antarctica was the only area that had microbes that did not overlap with those found in Central Park. Only a small percentage of the park's microbes were found to be already listed in databases.

Hunter-gatherer

The life of a hunter-gatherer is indeed, as Thomas Hobbes said of the state of nature, 'solitary, poor, nasty, brutish, and short'. In some respects, to be sure, wandering through the jungle bagging monkeys may be preferable to the hard slog of subsistence agriculture.

Tissues and organs

Tissues are grouped together in the body to form organs. These include the brain, heart, lungs, kidneys, and liver. Each body organ has a specific shape and is made up of different types of tissue that work together. For example, the heart consists mainly of a specialized type of muscle tissue, which contracts rhythmically to provide the heart's pumping action.

History is selective

History is selective. What history books tell us about the past is not everything that happened, but what historians have selected. They cannot put in everything: choices have to be made. Choices must similarly be made about which aspects of the past should be formally taught to the next generation in the shape of school history lessons.

Physical Activity

Participating regularly in physical activity has been shown to benefit an individual's health and wellbeing. Regular physical activity is important in reducing the risk of chronic diseases, such as heart disease and stroke, obesity, diabetes and some forms of cancer. The National Physical Activity Guidelines for Adults recommends at least 30 minutes of moderate-intensity physical activity, preferably every day of the week, to obtain health benefits.

Demographic change

How quickly this occurs depends on the dynamics of fertility, mortality and overseas migration. While a moderate pace of demographic change allows for gradual adjustment of the economy and policies to the changing population demographics, rapid changes are more difficult to manage. As a result, governments and society as a whole may need to take actions to address these issues.

University

A university is a lot more than just classes and exams. University is a concept that offers you a host of possibilities to develop both academically and personally. Find out about the different projects, clubs and societies that are in your university. You will definitely find something you are interested in.

Private Equity

It isn't rare for private equity houses to hire graduates fresh out of business schools, but nine times out of ten, the students who nab these jobs are the ones who had private equity experience before even starting their MBA program.

Microscopic invaders

We all know about bacteria, viruses, and microscopic protozoa. We can watch the way that these tiny agents move into our bodies and damage our organs. We have a growing understanding of how our body mounts defensive strategies that fight off these invaders, and have built some clever chemical that can help mount an assault on these bio-villains.

Food is important

Food is one of the most important things you'll ever buy. And yet most people never bother to think about their food and where it comes from. People spend a lot more time worrying about what kind of blue jeans to wear, what kind of video games to play, what kind of computers to buy.

Madagascar's

Scientists have recommended actions the government of Madagascar's recently elected president Andry should take to turn around the precipitous decline of biodiversity and help put Madagascar on a trajectory towards sustainable growth. Madagascar's protected areas, some of the most important for biodiversity in the world, have suffered terribly in recent years from illegal mining, logging, and collection of threatened species for the pet trade.

123. What is the word for a narrow, tongue shaped piece of land that sticks out into the sea? - - Peninsula
124. What do you call instructions for cooking a meal? - - Recipe
125. What is the word for a sick or injured person who is in hospital? - - Patient
126. What word means the process of voting for someone, for example, the political leader of a country. - - Election
127. The term green has come to be associated with the protection of what? - - Environment
128. What is the generic term for a person who once held the same position or title you now hold? - - Predecessor
129. What do we call someone who buys and sells insurance or shares in companies for other people? - - Broker
130. When your company's assets have increased by triple, how many times does it increase? - - three times.
131. What do bees collect from the center of flowers? - - Pollen
132. How would you describe a list of events that is placed in time order? - - chronology
133. How many days are there in a week? - - Seven
134. A famous canal links the Mediterranean Sea with the Indian Ocean, is it the Corinth or Suez Canal? - - Suez Canal
135. What is the antonym of horizontal? - - Vertical
136. If you get sick, you go to see a doctor in hospital. There are different types of doctors. Some doctors deal with bones; some deal with the heart. Which doctor deal with teeth? - - Dentist
137. What do you call the hair that grows above your eyes? - - Eyebrow
138. What instrument would you use when you want to weigh something? - - Scale
139. What do you call a length of time that lasts for seven days? - - Week
140. Tomorrow's lecture has been cancelled. If today is Tuesday, then on which day was the lecture cancelled? - - Wednesday
141. How many quarters in a calendar year? - - Four
142. How many days are there in a fortnight? - - Fourteen
143. How do you call three siblings who were born at the same time? - - Triplets
144. When you mix black and white, what color would you get? - - Gray
145. Where can we find the footnotes on a page? - Bottom.

146. What is the colorful sticker that is put on an envelope? - - Stamp
147. What product do you apply to your skin to protect from sunburn? - - Sunscreen
148. What is the quickest way to get to the 21st floor? - - Elevator
149. What does the chemical symbol H₂O stand for in chemistry? - -Water
150. Which continent is Canada located on? - - North America
151. What is the opposite of the minus sign? - - Plus Sign
152. A manufacturing process releases poisonous gases. What is the most important safety measure for workers at this plant –ensuring good ventilation, or appropriate footwear? - - Ensuring good ventilation
153. What is it called when two or more people are speaking to each other ? - - Conversation
154. What is the heading at the top of an article or page in a newspaper or magazine? - -
Headline.
155. What is the first paragraph of an essay? - - Introduction.
156. What do you call the person who plays musical instruments as a job? - - Musician
157. What is the storyline or the series of scenes of novels, movies, short stories or plays? - - Plot.
158. What do you call the pointing device that is connected to the computer? - - Mouse.
159. How many years does a centennial celebrate? - - One Hundred.
160. If someone lives in an urban area, where do they live? - - City
161. What are the animals that have fins? - - Fish
162. What do you call the number of people living in a specific area? - - Population
163. What is the opposite of the word "dangerous"? - - Safe
164. What is the red fluid that flows from the heart to the rest of the body? - - Blood
165. What kind of liquid do mammals feed their babies? - - Milk.
166. What do we call it when the moon completely blocks out the light from the sun? - -
Solar Eclipse
167. How would you describe an animal that no longer exist on the earth? - - Extinct
168. Who produces books? - - Publisher
169. Which of the following is not a means of transportation: plane, train, or car model? -
- Car Model
170. What are dollars, euros, and pounds the examples of? - - Currency
171. What is the boat that carries people from one side of a river to the other? - - Ferry
172. Who is the person who buys things in a shop? - - Customer
173. What do you call the daughter of your sister or brother? - - Niece
174. What is the opposite of "negative"? - - Positive
175. What do we use to get to the third floor when the elevator is broken? - - Stairs
176. What is the financial plan of how much money you will spend over a period of time?
- - Budget
177. What is the book that people write about their own stories? - - Autobiography
178. What is the northernmost or the southernmost part of the Earth called? - - Pole
179. What is the verb when employing someone or renting something? - - Hire

180. Despite all the advances in equality between the sexes, would more men or women play professional football? - - More men
181. If there are 8 black balls and 1 white ball, and I randomly pick one, which color is mostly likely to be picked? - - Black
182. What do you call the person who is guilty in law term? - - Criminal
183. Who is a female's partner as in a married relationship? - - Husband
184. What is the tool that you use to measure an adult's weight? - - Scale
185. Who is the person who gives evidence in court? - - Witness
186. What is the body part of your leg that is below your thigh and between your knee and ankle? - - Calf
187. What does IT stand for? - - Information Technology
188. What is the short form of a word? - - Abbreviation.
189. What do we call a festival which is held every four years gathering people together as a sporting event? - - Olympics
190. What is the 26th letter of the alphabet in English? - - Z
191. What gas will be formed from the boiling water? - - Vapour / Steam
192. Which part of your leg can make it possible to bend? - - Knee
193. What do you call a book where you arrange all of your photos together? - - Album
194. What is the antonym of vertical? - - Horizontal
195. What is the collective term for cows and bulls, especially on the farm? - - Cattle
196. If you want to accelerate a car, which part do you need to press with your foot? - - Throttle.
197. What part of a door or a window that we can use to open it? - - Handle
198. What will ice do when heated? - - Melt.
199. What is the publication called that issues academic papers? - - Journal

WRITING ESSAY

Total No. of Questions : 1 to 2

Questions Appear Rate : 1 to 2

Repeat Rate : 60%

**AMBITION
ABROAD**

1. It is argued that getting married before finishing school or getting a job is foolish. To what extent do you agree or disagree?
2. More and more women are raising a family with a career. Please give your suggestions on a personal level and national level.
3. Some employers involve employees in the decision-making process of products and services. What are the advantages and disadvantages of such policy?
4. The formal written examination can be a valid method to assess students' learning. To what extent do you agree or disagree?
5. It is often argued that studying overseas is overrated. There are many scholars who study locally. Is travel a necessary component of quality education?
6. There is no value to travel overseas for study, as you can be a good scholar even without leaving your home base. It is or isn't necessary to travel overseas for a better education?
7. In modern society, unemployment among young people is a serious problem. One solution is to shorten the working week. Give your opinion of the idea, considering the advantages and disadvantages, whether it can apply to young people or the whole workforce.
8. The disadvantages of tourism in less developed countries are as great as the advantages. What is your opinion?
9. In your opinion, what are the advantages and disadvantages of extreme or adventure sports?
10. Nowadays, more and more people engage in dangerous activities, such as sky diving and motorcycling. Are you in favor of them? Why? Use examples to support your opinion.
11. The information revolution by modern mass communication has both positive and negative consequences for individuals and for society." To what extent do you agree? Explain with your own experience.
12. Mass media, including TV and newspaper, have a great influence on humans, particularly on the younger generation. It has a pivotal role in shaping people's opinions. Discuss the extent you agree or disagree. Use your own experience or examples.

13. Climate change is a concerning global issue. Who should take the responsibilities, governments, big companies or individuals?
14. Should celebrities give up the right to privacy? Discuss
15. Some people claim that digital age has made us lazier, others claim it has made us more knowledgeable. Discuss both opinions, use your own experience to support.
16. You are given climate change as the field of study. Which area would you prefer? Explain why you pick this particular area of your study and give an example in the area you pick.
17. There are both problems and benefits for high school students study plays and works of theatres written centuries ago. Discuss and use your own experience.
18. Large shopping malls are replacing small shops. What is your opinion on this? Do you think this is a good or bad change?
19. There are more and more situations where credit cards are used instead of cash. The idea of a cashless society seems to be becoming more of a reality. How realistic do you think it is? What do you see as the potential benefits or problems?
20. The medical technology is responsible for increasing the average life expectancy. Do you think it is a curse or a blessing?
21. Some people point that experiential learning (i.e. learning by doing) can work well in formal education. However, others think a traditional form of teaching is the best. Do you think experiential learning is beneficial in high school or college?
22. Should parents be held legally responsible for the actions of their children? Do you agree with this opinion? Support your position with your own study, experience or observation.
23. Some universities deduct students' marks if assignments are given late. What is your opinion and give your recommendations?
24. Many people choose to emigrate to other countries. What are the advantages and disadvantages of living in a foreign country? Discuss with your own experience.
25. Living in the countryside or having a city life, which one do you prefer? Please use examples or your personal experience to support your opinion.

24. Governments should not put too much attention on arts, such as theaters, xxx and xxx. Governments should allocate more funds to areas of concern. Do you agree with this opinion or not? Use your own experience to support your idea.
25. The world's governments and organizations are facing a lot of issues. Which do you think is the most pressing problem for the inhabitants on our planet? And give solutions.
26. How does the design of building affect, either positively or negatively, where people work and live?
27. Some people argue that experience is the best teacher. Life experiences can teach more effectively than books or formal school education. How far do you agree with this idea? Support your opinion with reasons and/or your personal experience.
28. With the increase of digital media available online, the role of the library has become obsolete. Universities should only procure digital materials rather than constantly update textbooks. Discuss both the advantages and disadvantages of this position and give your own point of view.
29. More and more women are raising a family with a career. Please give your suggestions on a personal level and national level.
30. More and more countries spend large amounts of money on the restoration of buildings instead of on modern housing. To what extent do you agree or disagree with this analysis? Support your writing with your experience and/or examples.
31. Nowadays, it is increasingly more difficult to maintain the right balance between work and other aspects of one's life, such as time with family and leisure needs. How important do you think is this balance? Why do people find it hard to achieve?
32. Advanced technology such as artificial intelligence can translate a foreign language easily. Do you think learning a foreign language is still necessary? Support with your own experience.
33. Television has many functions to play in everyone's life. For some it's relaxation; for some, it is the companion. To what extent do you think the statement is true? Please provide your argument and supporting evidence from your own experience.
34. There is a current trend of paying teachers for students' achievements. Some people agree that it is an incentive for teachers to link students' achievements to teachers' salary, while others disagree. What is your opinion?

AMBITION ABROAD

The Black Diamonds

An **exotic** type of diamond may have come to Earth from outer space, scientists say. Called carbonado or "black" diamonds, the **mysterious** stones are found in Brazil and the Central African Republic. They are **unusual** for being the color of charcoal and full of frothy bubbles.

English class at Beijing Language Institute

There were twenty-six freshmen **majoring** in English at Beijing Language Institute in the class of 1983. I was assigned to Group Two with another eleven boy and girls who has **come** from big cities in China. I was **told** that language study required smallness so that we would each get more attention from the skillful teachers. The better the school, the smaller the class. I realized that my classmates were ready all **talking** in English, simple sentences tossed out to each other in their red-faced introductions and carefree chatting. Their intonations were curving and dramatic and their pronunciation refined and accurate. But as I stretched to catch the drips and drops of their humming dialogue, I couldn't **understand** it all, only that it was English. Those words now flying before me sounded a little familiar. I had read them and tried to speak them, but I had never heard them **spoken** back to me in such a speedy, fluent manner. My big plan of **beating** the city folks was thawing before my eyes.

Track Down Research

Having tracked down research that is **relevant** to your area of interest the next task is to actually make sense of that research. This section is intended to show you how to be critical of the research you **are reviewing** and how to check that the **evidence** is credible and represented appropriately. Unfortunately this means discussing the ways in which research findings may be misrepresented.

Genetically Modified Foods

Genetically modified foods provide no **direct** benefit to consumers; the food is not **noticeably** better or cheaper. The greater benefit, **proponents** argue, is that genetic engineering will play a crucial role in **feeding** the world's **burgeoning** population. Opponents disagree, **asserting** that the world already grows more food per person than ever before – more, even, than we can **consume**.

Estée Lauder

Leonard Lauder, chief executive of the company his mother founded, says she always thought she "was growing a nice little business." And that it is. A little business that **controls** 45% of the cosmetics market in U.S. department stores. A little business that sells in 118 countries and last year grew to be \$3.6 billion big in sales.

The Lauder family's shares are worth more than \$6 billion. But early on, there wasn't a burgeoning business, there weren't houses in New York, Palm Beach, Fla., or the south of France. It is said that at one point there was one person to answer the telephones who **changed** her voice to become the shipping or billing department as needed. You more or less know the Estée Lauder story because it's a chapter from the book of American business folklore. In short, Josephine Esther Mentzer, daughter of immigrants, lived above her father's hardware store in Corona, a section of Queens in New York City. She started her **enterprise** by selling skin creams concocted by her uncle, a chemist, in beauty shops, beach clubs and resorts. No doubt the portions were good — Estée Lauder was a quality fanatic — but the saleslady was better. Much better. And she simply outworked everyone else in the cosmetics industry. She **stalked** the bosses of New York City department stores until she got some counter space at Saks Fifth Avenue in 1948. And once in that space, she utilized a personal selling approach that proved as **potent** as the promise of her skin **regimens** and perfumes.

Emerald

Emerald is defined by its green color. To be an emerald, a specimen must have a **distinctly** green color that falls in the range from bluish green to green to slightly yellowish green. To be an emerald, the specimen must also have a rich color. Stones with weak saturation or light tone should be called "green beryl." **If** the beryl's color is greenish blue then it is an "aquamarine." If it is greenish yellow it is "heliodor".

This color definition is a source of **confusion**. Which hue, tone, and saturation combinations are the dividing lines between "green beryl" and "emerald"? Professionals in the gem and jewellery trade can disagree on where the lines should be **drawn**. Some believe that the name "emerald" should be used when chromium is the cause of the green color, and that stones colored by vanadium should be called "green beryl."

Calling a gem an "emerald" instead of a "green beryl" can have a significant **impact** upon its price and marketability. This "color **confusion**" exists within the United States. In some other countries, any beryl with a green color - no matter how faint - is called an "emerald."

Australian Renewable Energy Agency

The Australian Renewable Energy Agency (ARENA) has **awarded** \$2.49 million to cover a portion of the cost of a collaborative project led by the Australian Maritime College at the University of Tasmania, in **partnership** with The University of Queensland and CSIRO. The \$5.85 million 'Tidal Energy in Australia - Assessing Resource and Feasibility to Australia's Future Energy Mix' project will map the country's tidal energy in unprecedented detail before assessing its ability to contribute to Australia's energy needs. Lead chief investigator Associate Professor Irene Penesis from the University of Tasmania said the project would help overcome **barriers** to investment in commercial-scale tidal farms in Australia. 'With some of the largest tides in the world, Australia is **ideal** for this extremely reliable and low-carbon form of energy,' she said.

Iceland Volcanic Events

On average, Iceland **experiences** a major volcanic event once every 5 years. Since the Middle Ages, a third of all the lava that has **covered** the earth's surface has erupted in Iceland. However, according to a recent geological hypothesis, this estimate does not include **submarine** eruptions, which are much more extensive than those on the land surface.

The Resultant force

The overall result of two or **more** forces acting on an object is called the resultant force. The resultant of two forces is a single force, which has the same effect as the two forces combined. If two forces pull an object in **opposite** directions, the size of the resultant can be found by **subtracting** one force from the other. If the forces are **equal**, they balance each other.

Australian Renewable Energy Agency

The Australian Renewable Energy Agency (ARENA) has **awarded** \$2.49 million to cover a portion of the cost of a collaborative project led by the Australian Maritime College at the University of Tasmania, in **partnership** with The University of Queensland and CSIRO. Lead chief investigator Associate Professor Irene Penesis from the University of Tasmania said the project would help overcome **barriers** to investment in commercial-scale tidal farms in Australia. 'With some of the largest tides in the world, Australia is **ideal** for this extremely reliable and low-carbon form of energy,' she said.

Civil War

A Civil War reenactment is in part a memorial service. It is partly, too, a leisure activity. Furthermore most reenactors assert an educational import to the performance, and to develop their roles many pursue archival research with a rare dedication. On the other hand Civil War reenactments are increasingly commercial **spectacles**, with as many as fifty thousand Americans routinely gathering at (or near) historical Civil War battlefields in order to stage performances that purport to recreate the conflict, while hundreds of thousands more spectate (Hadden 1996:5). I will show how theoretical issues of **authenticity** arise as practical problems in the Civil War reenactment community by presenting my own observations from the 2006 Gettysburg reenactment and by **relying** on a number of texts produced by participant-observers. In particular I will refer to Robert Lee Hodge, who was made famous by Tony Horwitz's 1996 book, *Confederates in the Attic*, and who served as a kind of Virgil to the author on his journey through a Confederate Valhalla. From these sources I will **argue** that 'Living History' performances require an interpretive apparatus that takes genuine history as its authority, while remaining external to both participants and tourists, who may well be unaware of how closely their own involvement approximates genuine historical events.

Impact and management of purple loosestrife (New)

Recently, management of purple loosestrife (*Lythrum salicaria*), has been criticized for lack of evidence demonstrating negative impacts of *L. salicaria*, and management using biocontrol for lack of evidence documenting the failure of conventional control methods. Although little quantitative evidence on negative impacts on native wetland biota and wetland function was available at the onset of the control program in 1985, recent work has demonstrated that the invasion of purple loosestrife into North American freshwater wetlands alters **decomposition** rates and nutrient cycling, leads to reductions in wetland plant diversity, reduces pollination and seed output of the native *Lythrum alatum*, and reduces habitat **suitability** for specialized wetland bird species such as black terns, least bitterns, pied-billed grebes, and marsh wrens. Conventional methods (physical, mechanical or chemical), have continuously failed to **curb** the spread of purple loosestrife or to provide satisfactory control.

Although a number of generalist insect and bird species utilize purple loosestrife, wetland habitat specialists are excluded by **encroachment** of *L. salicaria*. We conclude that negative ecosystem impacts of purple loosestrife in North America justify control of the species and that **detrimental** effects

Global Textile Industry

The environmental impact of the global textile industry is hard to overstate. One-third of the water used worldwide is spent fashioning fabrics. For every ton of cloth **produced**, 200 tons of water is polluted with chemicals and heavy metals. An estimated 1 trillion kilowatt-hours of electricity powers the factories that card and comb, spin and weave, and cut and stitch materials into everything from T-shirts to towels, **leaving** behind mountains of solid waste and a massive carbon footprint.

“Where the industry is today is not really sustainable for the long term,” says Shreyaskar Chaudhary, chief executive of Pratibha Syntex, a textile manufacturer based outside Indore, India. With something of an “if you build it, they will come” attitude, Mr. Chaudhary has steered Pratibha **toward** the leading edge of eco-friendly textile production. Under his direction, Pratibha began making clothes with organic cotton in 1999. Initially, the company couldn't find enough organic farms growing cotton in central India to **supply** its factories. To meet production demands, Chaudhary's team had to convince conventional cotton farmers to change **their** growing methods.

Effective Leader

In search of lessons to **apply** in our own careers, we often try to **emulate** what effective leaders do. Roger Martin says this focus is misplaced, because moves that work in one context may make little sense in another. A more productive, though more difficult, approach is to look at how such leaders **think**. After extensive interviews with more than 50 of them, the author discovered that most are **integrative** thinkers -that is, they can hold in their heads two opposing ideas at once and then come up with a new idea that contains elements of **each** but is superior to both.

Crop Losses

As demand for food and competition for land rises, it is vital that crop losses are limited. Chemical protection has **provided** effective control of crop losses in recent years. Alongside chemical fertilizers and improved crop genetics, it has helped to increase crop yields dramatically over the last six decades. **However**, there is now a need to develop complementary alternatives, and researchers from the Rural Economy and Land Use Program have been exploring the potential of -- and barriers to -- alternative pest management approaches. 'Alternatives to chemical pesticides are **needed** because overuse of them leads to pesticide resistance and affects biodiversity and water quality,' says Dr Alastair Bailey. 'Heightened EU regulations are also leading to the withdrawal of many pesticide products. **Hence**, complementary approaches are required to reduce use and preserve the efficacy of those valuable pesticides that are still available to sustain food production systems.'

Sigmund Freud

That Sigmund Freud became a major intellectual presence in twentieth-century culture is not in doubt. **Nor** is there any doubt that at all times there was both fervent enthusiasm over and bitter hostility to his ideas and influence. But the exact means **by which** Freud became, despite this hostility, a master of intellectual life, on a par, already in the 1920s, with Karl Marx, Albert Einstein, Marie Curie and Bertrand Russell, has not been sufficiently explored. Strikingly, Freud emerged as a twentieth-century icon without the endorsement and support **of** an institution or a profession (in contrast to Einstein, Curie and Russell). Where are we to look for the details of this story of an emergent - and new - figure of immense cultural authority? One of the principal aims of this book is to show how this happened in one local, parochial yet privileged, site - Cambridge, then as now a university town stranded in the English Fens with a relatively small **fluctuating** population.

The Iron Age

People in parts of western Africa and southwestern Asia were the first to realize that the dark-silvery rocks poking out of the earth could be worked into tools and weapons, sometime around 1500 B.C., evidence shows. The metal was probably discovered there **by** accident when some ore was dropped into a fire and cooled into wrought iron, historians think. The eureka moment didn't reach Europe for **another** 500 years, traveling slowly north and west through Greece, Italy, central Europe and finally to the British Isles **with** the spread of the famous Celtic tribes. The Celts diffused iron technology over much of the continent through warfare, where their victory was assured due to the strength of iron weapons. Perhaps not the most peaceful of cultural exchanges, but where the technology did travel, it caught on fast. Iron **made** life a lot easier in those days, when just living to the age of 45 was a feat. By that time, much of Europe had **settled** into small village life, toiling the soil with bronze and stone tools..

Colorful Poison Frogs

Colorful poison frogs in the Amazon owe their great **diversity** to ancestors that leapt into the region from the Andes Mountains. This is the first study to show that the Andes have been a **major** source of diversity for the Amazon basin, one of the largest **reservoirs** of biological diversity on Earth. The finding runs **counter** to the idea that Amazonian diversity is the result of evolution only within the **tropical** forest itself. We have shown that you cannot understand Amazonian biodiversity by looking only in the **basin**. Adjacent regions have played a major role

Utility

Most housing agencies would pay the utility **costs** for tenants, generally because individual **unit** in developments don't have individual meters. The family pays its own **bills** to the utility **company**, or agencies deduct an **amount** from the family's **rent**.

Cultural studies

Cultural studies is a new way of engaging in the study of culture. In the past many academic subjects –including anthropology, history, literary studies, human geography and sociology – have brought their own disciplinary concerns to the study of culture. However, in recent decades there has been a renewed interest in the study of culture that has crossed disciplinary **boundaries**. The **resulting** activity, cultural studies, has emerged as an intriguing and exciting area of intellectual inquiry that has already shed important new light on the character of human cultures and which **promises** to continue so to do. While there is little doubt that cultural studies is coming to **be widely recognised** as an important and distinctive field of study, it does seem to encompass a potentially enormous area. This is because the term 'culture' has a complex history and range of usages, which have provided a legitimate focus of inquiry for several academic disciplines.

Civil society and the market

For too long we have held preconceived notions of 'the' market and 'the' state that were seemingly independent of local societies and cultures. The debate about civil society ultimately is about how culture, market and state **relate to** each other. Concern about civil society, however, is not only relevant to central and eastern Europe and the developing world. It is very much of **interest to** the European Union as well. The Civil Dialogue Initiated by the Commission in the 1990s was a first attempt by the EU to give the institutions of society - and not only governments and businesses-a voice at the policy-making tables in Brussels. The EU, like other international institutions, has a long way to go in trying to **accommodate** the frequently divergent interests of non-governmental organizations and citizen groups. There is increasing **recognition** that international and national governments have to open up to civil society institutions.

Native species in North America (R/W)

Of the more than 1,000 bat species worldwide, 22 are **native** to North America. And while there are no pollinator bats in our area, gardeners should **champion** those that do live here, because they're insectivorous. These bats **consume** moths, beetles and mosquitoes, and can eat up to 500 mosquito-sized insects per hour. They also protect gardens and crops from such **pests** as cucumber beetles, cutworms and leafhoppers.

Concept of Culture (R)

Many people today think of culture in the way that it was thought of in Europe during the 18th and early 19th centuries. This **concept** of culture reflected inequalities within European societies and their colonies around the world. This understanding of culture equates culture with civilization and contrasts both with nature or non-civilization. According to this understanding of culture, some countries are more civilized than others, and some people are more cultured than others. Anything that doesn't FIT into this category is labeled as chaos or anarchy. From this perspective, culture is closely tied to cultivation, which is the progressive refinement of human **behavior**.

In practice, culture referred to elite goods and activities such as haute cuisine, high fashion or haute couture, museum-caliber art and classical music. The word cultured referred to people who knew about and took part in these activities. For example, someone who used culture in this sense might **argue** that classical music is more refined than music by working-class people, such as jazz or the indigenous music traditions of aboriginal peoples.

The wholeness of thought

The writer-or, for that matter, the speaker conceives his thought whole, as a unity, but must express it in a line of words; the reader- or listener-must take this line of symbols and from it **reconstruct** the original wholeness of thought. There is **little** difficulty in conversation, because the listener receives innumerable cues from the physical expressions of the speaker; there is a dialogue, and the listener can **cut in** at any time. The advantage of group discussion is that people can overcome linear sequence of words by **converging** on ideas from different directions; which makes for wholeness of thought. But the reader is confronted by line upon line of printed symbols, without benefits of physical **tone** and emphasis or the possibility of dialogue or discussion.

Australian families (R/W)

Families provide emotional, physical, and financial care and support to their members, and are often the basis on which government assistance is determined and administered. Australians have **traditionally** experienced three main living arrangements over a life cycle: living with parents, living with a partner (for some of this period was children), and living alone in old age if that partner died. Now and into the future, living arrangements **throughout** a life cycle may also include living alone or in a group household before perhaps forming a long-term partnership, or living as a **lone** parent or alone after divorce or separation. These changes in living arrangements and family **characteristics** are the outcome of various demographic and social trends, such as declining fertility, increased rates of divorce and longer life **expectancy**.

Promoting good customer service (R/W)

Promoting good customer service must start at the top. If management doesn't realise how important this **aspect** of their business is, they will be at an instant **disadvantage** in their industry. Good customer response **equates** to loyal customers, which are the cornerstone of any successful business. No matter how much money you invest in your **marketing**, if you don't much have the fundamental elements of your business right, it's **wasted** money.

Spanish language (R/W)

If after years of Spanish classes, some people still find it impossible to understand some native speakers, they should not worry. This does not **necessarily** mean the lessons were wasted. Millions of Spanish speakers use neither standard Latin American Spanish nor Castilian, which predominate in US schools. The confusion is partly political - the Spanish-speaking world is very diverse. Spanish is the language of 19 separate countries and Puerto Rico. This means that there is no one standard dialect. The most common Spanish dialect taught in the US is standard Latin American. It is sometimes called "Highland" Spanish since it is generally spoken in the **mountainous** areas of Latin America. While each country retains its own **accents** and has some unique vocabulary, residents of countries such as Mexico, Colombia, Peru, and Bolivia generally speak Latin American Spanish, especially in urban centers. This dialect is noted for its **pronunciation** of each letter and its strong "r" sounds. This Spanish was spoken in Spain in the sixteenth and seventeenth centuries and was brought to the Americas by the early colonists. However, the Spanish of Madrid and of northern Spain, called Castilian, developed **characteristics** that never reached the New World.

Color preferences (R/W)

Many tests have shown that, in a very broad way, people in most parts of the world have similar color preferences. Blue is the most preferred and popular hue, followed in order by red, green, purple, yellow, and orange. Overlaying this basic order of color preference, **however**, are the responses of individuals, which of course vary **widely** and may also be very powerful. Children are likely to have strong **preferences** for some colors and aversions to others, but sometimes will not admit to them, since outside **factors** may be influential in determining both color preferences and the way that they are expressed or suppressed. Current fashions in clothes and accessories, gender-stereotyping, and peer-group pressure may all play a significant part. Boys, in particular, may be reluctant to admit to any strong preferences for colors **other than** those of favorite football teams, because color awareness may be regarded by their peer group as feminine.

ABROAD

William Shakespeare

For all his fame and celebration, William Shakespeare remains a **mysterious** figure with regards to personal history. There are just two primary **sources** for information on the Bard: his works, and various legal and **church** documents that have survived from Elizabethan times. Naturally, there are many **gaps** in this body of information, which tells us little about Shakespeare the man.

Integrated Ticketing

Well in 2004 we integrated ticketing in South East Queensland, so we **introduced** a paper ticket that allowed you to travel across all the three **modes** in South East Queensland, so bus, train and **ferry** and the second stage of integrated ticketing is the introduction of a Smart Card, and the Smart Card will enable people to **store** value so to put value on the card, and then to use the card for **traveling** around the system.

Contract Patterns Generator (CPG)

In animals, a movement is coordinated by a cluster of neurons in the spinal cord called the central **contract** patterns generator (CPG). This produces signals that drive muscles to contract rhythmically in a way that produces running or walking, depending on the **pattern** of pulses. A simple signal from the brain instructs the CPG to switch between different **modes** such as going from a standstill to walking.

Ocean Currents

For many years, the favorite horror story about **abrupt** climate change was that a shift in ocean currents could **radically** cool Europe's climate. These currents, called the overturning **circulation**, bring warm water and warm temperatures north from the equator to Europe.

Susan Lozier, an **oceanographer** at Duke University, says scientists have long worried that this ocean circulation could be disrupted.

Financial Markets

Financial markets swung wildly yesterday in the frenzied trading market by further selling of **equities** and fears about an unraveling of the global carry trade. At the same time, trading in the US and European credit markets were exceptionally **heavy** for a third consecutive day. London trading was marked by particularly wild **swings** in the prices of credit derivatives, used to ensure investors against **corporate** defaults.

Beekeeper

Dave Hackenberg, a beekeeper since 1962, can usually tell what killed his bees just by looking at them. If they're lying on the **ground** in front of a hive, it's probably pesticides, he says. If the bees are **deformed** and wingless, it's probably **vampire** mites. But last fall, Hackenberg saw something he had never seen before. Thousands of his bee colonies simply **disappeared**. He was in Florida at the time, pulling the lids off some of his commercial hives. To his **horror**, they were all empty.

Online Dating

Bruch and her colleague Mark Newman studied who swapped messages with whom on a popular online dating platform in the month of January 2014. They **categorized** users by desirability using PageRank, one of the algorithms behind search **technology**. Essentially, if you receive a dozen messages from desirable users, you must be more desirable than someone who receives the same number of messages from average users.

Then they asked: How far "out of their league" do online daters tend to go when pursuing a partner? "I think people are optimistic **realists**."

In other words, they found that both men and women tended to pursue mates just 25 percent more desirable than themselves. "So they're being optimistic, but they're also taking into account their own relative position within this overall desirability hierarchy."

And the study did have a few more **lessons** for people on the market: "I think one of the take-home messages from this study is that women could probably afford to be more aspirational in their **mate** pursuit."

Laurence Stephen Lowry

Laurence Stephen Lowry was an English artist. Many of his drawings and paintings depict Pendlebury,

Lancashire, where he lived and worked for more than 40 years, Salford and its vicinity. Lowry is famous for painting scenes of life in the **industrial** districts of North West England in the mid-20th century. He developed a **distinctive** style of painting and is best known for his **city** landscapes peopled with human figures, often referred to as "'**matchstick** men'". He painted mysterious unpopulated landscapes, brooding **portraits** and the unpublished "'**marionette**'" works, which were only found after his death.

South Australia

Now that the story's been scratched, it is only part of contingency planning. But it was a symptom of the dramatic turn of events in South Australia, and it flushed out other remarks from water **academics** and people like Tim Flannery, indicating that things were really much worse than had been **foreshadowed**, even earlier this year. So is Adelaide, let alone some whole **regions** of South Australia, in serious bother? Considering that the vast amount of its drinking water comes from the **beleaguered** Murray, something many of us outside the state may not have quite realized. Is their **predicament** something we have to face up to as a nation?

Beautiful Buildings

Along the way we have built **unashamedly** beautiful buildings, two of which have won and another was runner-up in the prestigious United Nations World **Habitat** Award: the first time an Australian building has received that international honour. We rely on older **concepts** of Australian architecture that are heavily influenced by the bush. All residents have private verandhas which allow them to **socialize** outdoors and also creates some "defensible space" between their bedrooms and public areas. We use a lot of **natural** and soft materials to build beautiful landscape gardens.

Sunflowers by Van Gogh

These two paintings, both called "Sunflowers," are generally accepted as the finest of several **depictions** of the thick-stemmed, nodding blooms that Van Gogh made in 1888 and 1889 during his time in Arles. The first is now in the collection of the National Gallery in London, and the second is in the Van Gogh Museum in Amsterdam. Van Gogh referred to this work as a "**repetition**" of the London painting. But art historians and curators have long been **curious** to know how different this "repetition" is from the first. Should it be considered a copy, an independent artwork or something in between? An **extensive** research project conducted over the past three years by conservation experts at both the National Gallery and the Van Gogh Museum has concluded that the second painting was "not intended as an exact copy of the **original** example," said Ella Hendriks, a professor of conservation and restoration at the University of Amsterdam, who was the lead researcher on the project.

Nanotechnology

What is nanotechnology? Well, a report that was put together by a **combination** of the Royal Society and the Royal Academy of Engineering that came out last summer, **identified** two topics. Nano-science is the study of **phenomena** and the manipulation of materials at atomic, molecular and macromolecular scales, where properties differ significantly from those as a larger scale. Nanotechnologies are the design characterization, production and application of **structures**, devices and systems by controlling shape and size at the nanometer scale. So I'll talk a little bit more in a moment about what a nanometer is, but **loosely** speaking people think of nanotechnologies as being a sort of a hundred nanometers or less.

Carbon-rich soils

Rebuilding carbon-rich agricultural soils is the only real productive **permanent** solution to taking excess carbon dioxide from the atmosphere. She's **frustrated** that scientists and politicians don't see the same opportunities she sees.

This year Australia will **emit** just over 600 million tonnes of carbon. We can sequester 685 million tonnes of carbon by **increasing** soil carbon by half a per cent on only two per cent of the farms. If we increased it on all of the farms, we could sequester the **whole** world's emissions of carbon.

Cars in America

There are some 250 million cars in America, 250 million cars in the country with just over 300 million people. And most of those vehicles, of course, are gas **powered**. This poses a huge challenge given the limited supplies of oil and the growing **urgency** of the global warming crisis.

But there is good news, according to our guests today. And that is we have the know-how and the technology to build **sleek**, fast automobiles that don't use gasoline. These vehicles of tomorrow are powered by **hydrogen**, electricity, bio-fuels, and digital technology. And they already exist. So what's stopping us from putting them on the roads? Our guests today will help answer that.

Malaria

Also, malaria is something that is a very complex disease with this complex life cycle. That means that if you're going to **eliminate** it, you have to be able to target cute parasites and humans. You have to be able to target parasites in the mosquitoes, that mosquito **population**. And so that requires a lot of resources. It requires really good planning and a health system across all these different **levels**. And so I think the political capital that you need for that, the educational **infrastructure** you need for that, the economic resources you need for that are quite a **challenge**.

Dogs and Hygiene Hypothesis

Dogs aren't just man's best friend. Previous studies have shown that kids with dogs are less likely to develop asthma. Now a new study may show how—if results from mice apply to us. The work was presented at a meeting of the American Society for Microbiology. The study tests what's called the **hygiene** hypothesis. The idea is that extreme cleanliness may actually promote disease later on. Researchers collected dust from homes that had a dog. They fed that house dust to mice. They then infected the mice with a **common** childhood infection called **respiratory** syncytial virus—or RSV.

Locomotion

We are trying to understand the locomotion of one of our closest living **relatives**, which is the orangutan, and also the locomotion of all of the apes and the common ancestor of humans and the other apes. And in that area, we have had a big problem **traditionally**, and that we know a lot about how they move around the forest. I've been out to the forest and spent a year recording the **different** types of locomotion they use, but we have no idea about the **energetic** cost of how they move around the forest and the solutions that they find to problems of moving around the canopy. And what we're doing here is using the park or athletes as an analogy for a large bodied ape moving around a complex **environment** and getting them to move around in the course that we've made that they've never seen before. And we're going to record their energetic expenditure while they're doing it.

Productivity in Industrial Revolution

I'm going to argue that the **tremendous** increases in productivity that we **associate** with the industrial revolution originate not so much from changes in science or **technology** or new inventions, where England was far from **unique** as from changes in attitudes, attitudes towards morality, towards what constituted the good. Attitudes towards property, which became in England individuals long before it did on the **continent**. Attitudes toward the proper role of government. And **together**, these attitudes constitute much of what the Luddites were protesting against.

Lead-in Time

Lead-in time is the amount of time that elapses between a business placing an order with a supplier for more stock or raw **materials** and the delivery of the goods to the business. Businesses want the lead-in time to be as short as possible, so that they can meet their customer orders and **minimize** the time between paying for the stock and receiving the **revenue** from the customer. However, this may not happen due to a number of **factors**, such as delays in the supplier receiving the order, or the breakdown of the suppliers' lorries **delivering** the stock to the business.

Life on Mars

The thing that makes it difficult is because even if life had evolved on Mars, the chances of being preserved are very small. If we use Earth as a **reference** and our planet is teeming with life, yet it rarely preserves evidence of life of the fossil record. And the focus now is on exploring for **habitable** environments. If you're looking for water, a **source** of energy, either solar energy or thermal energy or chemical energy, and then **organic** carbon, assuming life as we know it on Earth based on carbon. So those are sort of the three things that we're looking for in the course of our mission.

Green chemistry

Green chemistry is a concept designed to develop **technologies** which allow chemistry to be practiced with minimal damage to the environment or in an environmentally **compatible** way. And it's meant to cover both chemical processes and chemical **products**. The center, if you would, set up about seven or eight years ago, and the idea was to provide a hub of activities that covered **fundamental** research work, industrial collaboration, but also educational developments. So we work with schools and on public [understanding] projects as well, and also networking. So we network out to well over 1000 people around the globe.

WRITE FROM DICTATIONS

1. The celebrated theory is still the source of great controversy.
2. Economic development needs to be supported by the government.
3. Although sustainable development is not easy, it is an unavoidable responsibility.
4. Americans have typically defined the process of plant growth in quantitative terms.
5. An introduction is an essential element of presentation.
6. Tribes vied with each other to build monolithic statues.
7. Education and training provide important skills for the labor force.
8. Convincing evidence to support this theory is hard to obtain.
9. The ability to work with fellow students cannot be stressed enough.
10. The department is doing some crucial work on climate change.
11. It may not be possible to solve the problem easily.
12. Students are encouraged to monitor their own attendance.
13. A professor took one year off to work on her book.
14. Food has become a political issue in the world.
15. All students are expected to attend ten lab sessions per semester.
16. Radio is a popular form of entertainment throughout the world.
17. Speed is defined as how quickly an object or a person moves.
18. Animal and plant cells have a number of structures in common.
19. Nurses can specialize in clinical work or management.
20. Being bilingual does not necessarily mean having the ability to analyze the languages.
21. International exchange formed the important part of our study program.
22. The designers will complete the plan later today.
23. Renovation works are currently undertaken throughout the whole building.
24. Castles were designed to intimidate both local people and enemies.
25. A series of lectures showed economics have been recorded.
26. Some vocational courses at institutions are funded by private enterprises.
27. A laptop computer has been found in the biology lab.
28. Measures must be taken to prevent the unemployment rate from increasing.
29. Blue whales are the largest mammals that have ever lived.
30. Most scientists believe that climate change threatens the lives on earth.

31. Salt is produced from seawater or extracted from the ground.
32. More graduate training is often needed after university study has finished.
33. The course will help students to improve their pronunciation skills.
34. Human beings compete with other living things for resources and space.
35. Your ideas are discussed and debated in seminars and tutorials.
36. Certain scientific principles must be learned verbally or by logical deduction.
37. Many experts think that the world climate is constantly changing.
38. The island is located at the south end of the bay.
39. The students were instructed to submit their assignments before Friday.
40. Academic libraries across the world are steadily incorporating social media.
41. Default designed packages are likely to be used for most computers.
42. Understanding how to use the library will save your time.
43. The opening hours of the library are reduced during summer.
44. The stock market crash had repercussions throughout the world.
45. This morning's lecture on economic policy has been canceled.
46. Students should leave their bags on the table by the door.
47. Traffic is the main cause of air pollution in many cities.
48. His appointment to the Minister of Culture was seen as a demotion.
49. Photography can be very useful to geographical research.
50. He was regarded as the foremost economist at his time.
51. Classical mechanics is sometimes considered as a branch of applied mathematics.
52. Astronomers use light years to measure distance in space.
53. Honey can be used as food and a health product.
54. Farmers need to adapt to the changes in climate.
55. Our study program equips students with essential skills for university.
56. Linguistics is the scientific study and analysis of language.
57. Trees benefit the city by soaking up the rainwater that runs off the roads.
58. New materials and techniques are changing the style of modern architecture.
59. Psychologists say that what we have experienced influences our behaviors.
60. All industries are a system of inputs, processes, outputs and feedback.

61. The shipwreck of this year ruined some artifacts which were interested by historians.
62. They developed a unique approach to training their employees.
63. An effective business manager is always open to new ideas.
64. The department works closely with business communities.
65. The orchestra will be led by a visiting conductor.
66. There have been long streams of extreme weather throughout human history.
67. There are many different types of governments in the world.
68. Today we have a guest speaker who is visiting from Canada.
69. There is no fixed career path for a qualified journalist.
70. The poster of this play is hung in the largest lecture theater.
71. Request for late applications will not be accepted under any circumstances.
72. You do not need specialist knowledge to enjoy this book.
73. You will be tested by continuous assessments and examinations.
74. Practical experience is a vital part of legal training.
75. Relying on natural ability will not get you far in science.
76. Auditions for the university choir will be held next week.
77. Marine environments have been destroyed by pollution and unsustainable development.
78. There will be a chemistry test in the class next week.
79. Sea levels are expected to rise during the next century.
80. There is an accounting assignment for finance students.
81. We should never underestimate the power of creative design.
82. The dance department stages elaborated performances each semester.
83. Consumer confidence tends to increase as the economy expands.
84. The digital camera has some advantages over traditional film.
85. The extent of advertising to children is very much open to debate.
86. A number of students have volunteer jobs.
87. The railway makes long-distance travel possible for everyone.
88. Reading histories involves a level of careful selections.
89. The essay is easy to write once the research is completed.
90. A world expert in financial management will give a guest lecture.

91. A group meeting will be held tomorrow in the library conference room.
92. While some people regard it as reforming zeal, others regard it as recklessness.
93. There is a great deal of debate on that topic.
94. I thought it was through the small meeting room.
95. Keeping organized class notes will make study time more efficient.
96. The course office is closed on Wednesday and Friday.
97. Default designed packages are likely to be used for most computers.
98. Currently the growth of the economy is unpredictable.
99. Designers need to keep up with the social trends.
100. The collapse of the housing market has caused recessions.
101. Important details from the argument are missing in the summary.
102. The economic predictions turned out to be incorrect.
103. The key witnesses to the event have conflicting recollections.
104. Good nutrition is crucial to general health and vitality.
105. The momentum is defined as the combination of mass and velocity.
106. The course involves a combination of pure and applied mathematics.
107. A world-renowned expert on economics and marketing will give a lecture.
108. The north campus car park could be closed on Sunday.
109. Our view is that educational reforms have been inadequately implemented.
110. The assessment of this course will begin next week.
111. Plants are the living things that can grow in land or in water.
112. Research shows that exercising makes us feel better.
113. The study center in the library has all the latest technologies.
114. Students who study overseas can significantly improve their work chances.
115. The bus for London will leave 10 minutes later than planned.
116. Rising sea temperatures are a sign of climate change.
117. Some students find that true or false questions are harder than short answers.
118. The archeologist's new discoveries stand out in previously overlooked foundations.
119. The qualification will be assessed by using a criterion-referenced approach.
120. Medical researchers have focused on different causes of diseases and treatments.

121. Vocabulary that is peculiar in a special field is called jargon.
122. The rising temperature is changing the wildlife population.
123. Remember, the prestigious election of stewardship has strict eligibility criteria.
124. A demonstrated ability to write clear, correct and concise English is bigotry.
125. The biology department is dedicated to research activities.
126. Educational level is found to be related to social and economic background.
127. The essay will be published once the research is finished.
128. Important details from the argument are missing in the summary.
129. The university has invested in new technologies designed to support learning.
130. The college operates a system of continuous assessments.
131. Listening is the key skill needed to succeed in this course.
132. Recession triggers exciting creativity and high rates of public wisdom.
133. We study science to understand and appreciate the world around us.
134. The essay is easy to write once the research is completed.
135. Packaging is very important to attract the attention of a buyer.
136. Studies showed there is a positive correlation between the two variables.
137. You should have awareness of how the business operates globally.
138. Scientists are always asking the government for more money.
139. We encourage students to complete their applications before the deadline.
140. The curriculum should be adjusted to the current development.
141. An architect is required to have problem-solving skills and an eye for design.
142. Time and distance are used to calculate speed.
143. Please return the reference book to the correct position on the library shelf.
144. All dissertations must be accompanied by a submission form.
145. Students requiring an extension should apply sooner rather than later.
146. The chemistry building is located near the entrance to the campus.
147. The plight of local wildlife has been ignored by developers.
148. Graduates from this course typically pursue careers in financial sector.
149. A world expert in financial management will give a guest lecture.
150. The application processes may take longer than expected.

151. It is a debate about the value of knowledge.
152. The city's founders created a set of rules that became law.
153. Before you choose your university courses, you should consider your future career.
154. I thought a good architectural structure should be useful, durable and beautiful.
155. The very basic definition of computing would be counting and calculating.
156. Our professor is hosting the business development conference.
157. He landed a job in a very prestigious law firm.
158. Some people are motivated by competition, while others prefer to collaborate.
159. There is a pharmacy on campus near the bookstore.
160. Calculators allow us to add numbers without making mistakes.
161. Accountancy students have to hand in their dissertations this week.
162. The subject was complex and difficult to explain.
163. You need to put those books on the table over there.
164. Tutors should set clear goals at the start of the class.
165. Strangely, people are simultaneously impressed by and are skeptical about statistics.
166. Plants are able to continue growing throughout their lives.
167. The student service center is located on the main campus behind the library.
168. Continuing students will be sent the necessary application
169. You must hand in your essays by midday on Friday.
170. Too much information may have been avoided by the group research design.
171. The library will be closed for staff training tomorrow morning.
172. The notification will not be received until the following week.
173. The student union hosts a variety of social events.
174. Most of the lectures begin promptly, so do not be late.
175. New developments in manufacturing are constantly changing the way we live.
176. Optional tutorials are offered in the final week of the term.
177. Extracurricular activities can help students develop more talents.
178. A visit to the designed museum is of great value.
179. The artists tied to the conservative politicians earned the roles of critics.
180. Please note that the submission deadlines are only negotiable in exceptional circumstances.

181. The key difference between courses is the kind of assessment.
182. The university will cease the colossal renovation of the faint empty theater.
183. The director of the gallery was grateful for the anonymous donation.
184. A new collection of articles has just been published.
185. His analysis study appears to be based on the false premise.
186. The students were instructed to submit their assignments before Friday.
187. Any gain on sales of property must be allocated promptly.
188. When the root system of a plant fails, foliage suffers.
189. The study of nutrition is a growing field.
190. The department has a higher-than-normal proportion of postgraduate students.
191. I thought it was through the small meeting room.
192. Daily practice can build confidence and improve skills.
193. Students must wear protective clothing that is provided in the medical laboratory.
194. The campus library will be closed during the winter break.
195. The commissioner will apportion the funds among all the authorities.
196. The subject was complex and difficult to explain.
197. If you need additional help, visit the student resource center.
198. In this language course, we focus on both fluency and accuracy.
199. The speaker began by giving an outline of her presentation.
200. A good academic paper should present a clear argument.
201. Lectures are the oldest and the most formal teaching method at university.
202. This course is based on experimentation and practice.
203. Advanced technology created growth in the economy.
204. This advanced course requires a basic knowledge of economic theory.
205. The area has a variety of underwater habitats and species.
206. You can use your laptops in the lecture.
207. Computers used to be larger than they are now.
208. Formal conclusions could be established through rigorous experiments.
209. Food containing ample calories provides little or no nutritional value.
210. Social psychology is concerned with the understanding of human behaviors.

- 
211. Our faculty includes five libraries across the university.
212. The university library has most of the necessary books.
213. Physical strength can be improved through regular training.
214. Gravity is the force that attracts two bodies toward one another.
215. Muscle cells bring parts of the body closer together.
216. Artists need to make their works both original and accessible.
217. Years of training are required to become a medical specialist.
218. A series of the observations were carried out in the classroom.
219. The reception staff give advice on renting private accommodation.
